- (1) Numeric search field that may be searched using numeric operators or ranges.
 (2) Either STN or Derwent format may be used.
 (3) Search with implied (S) proximity is available in this field.
 (4) Search with implied (L) proximity is available in this field.
 (5) Contains the WPIDS/WPIX/WPINDEX accession number.

Controlled Term (/CT) Thesaurus

All Relationship Codes can be used with both the SEARCH and EXPAND command.

Code	Content	Examples
ALL	All Associated Terms (BT, SELF, USE, UF, EXA, TNA, SNA, EC, RT, OLD, NEW, NT, KT)	E FUNGICIDE+ALL/CT
AUTO (1)	Automatic Relationship (SELF, USE, UF, OLD, NEW, TNA, SNA, EC)	S FERMENTER+AUTO/CT
BT	Broader Terms (also BT1=1st level, BT2=2nd level etc.)	E BENOMYL+BT/CT
HIE	Hierarchy Terms (all broader and narrower terms) (BT, SELF, NT)	E PROTEASE+HIE/CT
KT	Keyword Terms (KT, SELF)	E ENZYME+KT/CT
NT	Narrower Terms (also NT1=1st level, NT2=2nd level etc.)	S FUNGICIDE+NT/CT
PFT	Forbidden and Preferred Terms (SELF, USE, UF)	S ANTIFUNGAL+PFT/CT
RT	Related Terms (SELF, RT)	E PESTICIDE+RT/CT
STD	Standard Terms (BT, SELF, NT, RT)	E DINOSEB+STD/CT
USE	Preferred Terms (SELF, USE)	S FERMENTER+USE/CT

- (1) Automatic Relationship is SET OFF. In case of SET REL ON the result of EXPAND or SEARCH without any relationship code is the same as described for AUTO.

DISPLAY and PRINT Formats

Any combination of formats may be used to display or print answers. Multiple codes must be separated by spaces or commas, e.g., D L1 1-5 TI PI. The fields are displayed or printed in the order requested.

Hit-term highlighting is available for all fields. Highlighting must be ON during SEARCH to use the HIT, KWIC, and OCC formats.

Format	Content	Examples
AB	Abstract	D TI AB
AI (AP) (1)	Application Information	D AI
AN	Accession Number	D AN
AU	Author	D AU
CC (CCEN)	Classification Code (code and/or text)	D CC
CS	Corporate Source	D AU CS

(1) Application, priority and patent numbers are available in Derwent and STN format. The format for DISPLAY, PRINT, SELECT and SORT is controlled by the Messenger SET PATENT command. The STN format is default. 'SET PAT DERWENT' changes (permanently) to the Derwent format. To change to the STN format again, enter 'SET PAT STN'.

(2) Custom display only.

(3) SCAN must be specified on the command line, i.e., D SCAN or DISPLAY SCAN.

SELECT, ANALYZE, and SORT Fields

The SELECT command is used to create E-numbers containing terms taken from the specified field in an answer set.

The ANALYZE command is used to create an L-number containing terms taken from the specified field in an answer set.

The SORT command is used to rearrange the search results in either alphabetic or numeric order of the specified field(s).

Field Name	Field Code	ANALYZE/ SELECT (1)	SORT

(1) HIT may be used to restrict terms extracted to terms that match the search expression used to create the answer set, e.g., SEL HIT AU.

(2) Appends /BI to the terms created by SELECT.

(3) Selects or analyzes ISSN and CODEN with /ISN appended to the terms created by SELECT.

(4) Selects or analyzes ISSN and CODEN with /SO appended to the terms created by SELECT.

 CODEN: EMTED2 ISSN: 0141-0229
 DT Journal
 LA English
 AB Two endo-1,4-beta-D-xylanases (EC-3.2.1.8), xyl1 and xyl2, were purified from a commercial enzyme preparation derived from Humicola insolens by anion-exchange chromatography, size-exclusion chromatography and cation-exchange chromatography. The homogenous proteins had a mol.weight of 6,000 and 21,000, and isoelectric points of 9.0 and 7.7 for xyl1 and xyl2, respectively. Both enzymes had similar pH and temperature optima (pH 6-6.5 and 55-60 deg), but their stability at various pH and temperature differed. The molar activity towards beech, birch and larch xylan, and wheat arabinoxylans was higher for xyl2. Both enzymes had remarkably lower molar activities toward the insoluble fractions of these xylans or toward the essentially insoluble beech xylan, but the decrease was less pronounced with xyl2. This might be explained by differences in specific adsorption, with xyl2 adsorbing strongly on beech xylan. In contrast to

xyl1, xyl2 was markedly inhibited by a number of metal ions. The reaction products formed during hydrolysis of different xylans and the end products were the same for both enzymes, but their relative proportions differed slightly. (34 ref)

OS WPI: 1997-121141 [12]
AB Macromolecules such as glycoproteins and nucleic acids are crystallized in the presence of a 4-(1-18C alkyl)-umbelliferone salt (A). In a preferred process, (A) is 4-methylumbelliferone sodium salt. A solution containing the macromolecule at 0.1-10,000 ug/ml is mixed at a ratio of 1000:1 to 1:1000 with a solution of 0.1-1,000 mM (A), and the mixture is incubated at 0-25 deg. The macromolecule solution is preferably a phosphate buffer solution (pH 3-9) containing 1-500 mM (A), provided that the concentration of (A) in the macromolecule solution is less than that in the crystallization solution. The crystallized macromolecules may be used for X-ray structural analysis, as a pharmaceutical or as seed crystals. (4pp)
