Record Content

- Full text and classifications for the latest publications of U.S. patents and applications issued by the U.S. Patent and Trademark Office since 2001
- Patent assignment and reassignment information is available from 2001 – present.
- Complete Chemical Abstracts indexing for one equivalent U.S. chemical patent may also be included in a record
- Legal status information for U.S. patents since 2001
- Patent Classifications: NCL, CPC, IPC
- PatentPak® - specific PDF links and data

File Size	More than 5.2 million records (07/2025)
Coverage	2001-present

Updates

- Twice a week
- U.S. Patent Classifications – no longer updated
- Cooperative Patent Classifications – updated weekly
- International Patent Classifications – updated weekly

(1) Numeric search field that may be searched with numeric operators or ranges.
(2) Either STN format or Derwent format may be used.
(3) Search with implied (S) proximity is available in this field.
(4) This is a valid search field, but data is not available as of 11/2001.
(5) An online thesaurus is available for this field.
(6) This field contains the classifications and catchwords for main classification subject headings and subheadings from the (7th) edition of the WIPO International Patent Classifications (IPC) manual. To search the classifications from any of the specific editions (1-8) of the IPC manual, use the field code followed by the edition number, e.g., /IC2, ICM2, /ICS2 for the 2nd edition. Catchwords are included only in the fields for the 7th, 6th, and 5th editions of the IPC manual.
(7) This field is range-searchable in Manual of Classification order. However, it is not a numeric field and may not be searched using numeric operators.
(8) Available for patent documents published starting in 2001.
(9) U.S. provisional priority numbers are searched only with the P appended, e.g., US1999-121903P/PRN.
(10) When searching combinations of CPC and CPC.KW data, use (S) proximity operator.
(11) These fields have not been populated since December 31, 2005 with the introduction of IPC Reform.
(12) Application numbers for U.S. utility patents from series code 13 forward, design patents (series code 29) and provisional patent applications (series code 60 and 61) may be searched either with or without their series code. Include the series code if known to ensure precision. Note that provisional patent application numbers searched without their series codes must have a P appended to

the end of the number (e.g., US2013-686038P). Series code information is not available for U.S. patent application numbers with series codes below 13.

(13) Available for selected patent documents usually from September 2012 or later.

Property Fields[(1)]

In USPAT2 a numeric search for a specific set of physical properties (/PHP) is available within the Basic Index fields (most notably TI, AB, CLM, DETD, and SUMM). The numeric values are not displayed as single fields, but are instead highlighted within HIT, KWIC, and ALL displays.

EXPAND in the /PHP field to find numeric properties of interest, or type HELP NPS at an arrow prompt while in USPAT2 to see a list of all available numeric properties. The /PHP index contains a complete list of codes and related text for all physical properties available for numeric property searching in USPAT2.

Field Code	Property	Unit	Symbol	Search Examples

(1) Exponential format is recommended for the search of particularly high or low values, e.g., 1.8E+7 or 1.8E7 (for 18000000) or 9.2E-8 (for 0.000000092).

Super Search Fields

Enter a super search code to execute a search in one or more fields that may contain the desired information. Super search fields facilitate crossfile and multifile searching. EXPAND may not be used with super search fields. Use EXPAND with the individual field codes instead.

Search Field Name	Search Code	Fields Searched	Search Examples	Display Codes

(1) Either STN format or Derwent format may be used.
(2) A thesaurus is available for this field.
(3) EXPAND and SELECT work with this field.
(4) Application numbers for U.S. utility patents from series code 13 forward, design patents (series code 29) and provisional patent applications (series code 60 and 61) may be searched either with or without their series code. Include the series code if known to ensure precision. Note that provisional patent application numbers searched without their series codes must have a P appended to the end of the number (e.g., US2013-686038P). Series code information is not available for U.S. patent application numbers with series codes below 13.
(5) The /PASS search code searches the applicant/assignee name portion of the /PA and /USPA fields, as well as /UO and /UOS.

CPC (/CPC) Thesaurus

The Cooperative Patent Classification (CPC) is jointly developed and maintained by the European Patent Office and the US Patent and Trademark Office. This thesaurus is available in the /CPC search field. All relationship codes can be used with both the EXPAND and SEARCH commands.

Relationship Code	Content	Search Examples
ALL	All usually required terms (BT, SELF, CODE, DEF)	E C12M0001-00+ALL/CPC
AUTO **(1)**	Automatic relationship (BT, SELF, CODE, DEF)	E G01J003-443+AUTO/CPC
BT	Broader terms (BT, SELF)	E G01J0003-443+BT/CPC
CODE	Classification Code (SELF, CODE)	E CARTRIDGES+CODE/CPC
DEF	Definition (SELF, DEF)	E B65G0045-16+DEF/CPC
HIE	Hierarchy terms (all broader and narrower terms) (BT, SELF, DEF, NT)	E A01B0001-00+HIE/CPC
KT	Keyword terms (SELF, KT)	E LASER+KT/CPC
MAX	All associated terms	E G01J0003-44+MAX/CPC
NEXT	Next classification within the same class (SELF, NEXT)	E A01B0001-24+NEXT/CPC
NEXT(n)	Next n classification within the same class	E A01B0001-24+NEXT3/CPC

NT	Narrower terms	E G05B0001-04+NT/CPC
PREV	Previous Code within the same class (SELF, PREV)	E G05B0019-00+PREV/CPC
PREV(n)	Previous n classifications within the same class	E G05B0019-00+PREV2/CPC
TI	Complete Title of SELF Term and Broader Terms (BT, SELF)	E G05B0001-03+TI/CPC

(1) Automatic Relationship is SET OFF. In case of SET REL ON the result of EXPAND or SEARCH without any relationship code is the same as described for AUTO.

Thesaurus Fields - IPC Thesaurus and U.S. National Patent Classification

A thesaurus is present for the National Patent Classification fields (/INCL, /INCLM, /INCLS, /NCL, /NCLM, /NCLS, /RPCL) and the International Patent Classification fields. The classifications and catchwords for the main headings and subheadings from the 8th edition of the WIPO International Patent Classification (IPC) manual are available in the following fields: /IC, /ICM, /ICS, /IPC, IPCI, and IPCR. The classifications from the previous editions (1-7) are also available as separate thesauri. To EXPAND and SEARCH in the thesauri for editions 1-8, use the field code followed by the edition number, e.g., /IC2, /ICM2, /ICS2 for the 2nd edition. Catchwords are included only in the thesauri for the 8th, 7th, 6th, and 5th editions.

Code	Content	Example

RT	Related Terms	E A01B001-16+RT/IPC

(1) AUTOMATIC relationship is SET OFF. If you SET RELATION ON, the result of EXPAND without any relationship code is the same as described for AUTO.

(2) Keyword terms are the catchwords corresponding to the USPTO Manual of Classifications subject index headings and subheadings.

DISPLAY and PRINT Formats

Any combination of formats may be used to display or print answers. Multiple codes must be separated by spaces or commas, e.g., D L3 1-10 TI,AB or D L3 1-10 TI AB. The fields are displayed or printed in the order requested.

Hit term highlighting is available in all fields except DRWN and ECL. Highlighting must be on when a SEARCH is performed to use the FHITSTR, HIT, HITRN, HITSTR, KWIC, and OCC formats.

Format	Content	Examples
AB	Abstract	D 1-3 AB
AI (AP) **(1)**	Application Information	D 4 9 AI
AN **(2)**	Accession Number	D AN
ARTU	Art Unit	D L3 5-7 ARTU
CC (SX)	Classification Code and Section cross-reference (CAS data)	D L3 CC 1-5
CLM	Patent Claim Text	D CLM L8
CLM(n) **(3)**	Patent Claim Text for Claim n	D CLM(2)
CLMN	Number of Claims	D CLMN
CT **(2)**	Controlled Term (CAS data)	D 4 CT
CPC	Cooperative Patent Classification	D CPC
CPCI	CPC Initial Classification	D CPCI
CPCR	CPC Reclassification	D CPCR
DCD	Disclaimer Date	D L3 6,8 DCD
DETD	Detailed Description	D 1-4 DETD
DRWD	Drawing Description	D L9 DRWD 3-6
DRWN	Number of Drawings	D DRWN
DT (TC)	Document Type	D DT 2,6-10
ECL	Exemplary Claim Number	D 7 L3 ECL
ECLM **(3)**	Exemplary Claim Text	D 1-5, 10 ECLM
EXF **(2)**	Examiner's Field of Search	D 1,5,8 EXF
EXNAM	Examiner Name	D EXNAM 4-8,11
FS **(2)**	File Segment	D FS
GOVI	Government Interest	D 3,5,7 GOVI
ICM **(2)**	IPC, Main	D 5-6 L1 ICM
ICS **(2)**	IPC, Secondary	D L4 1-6 ICS
IN (AU)	Inventor (includes INA)	D IN
INA **(3)**	Inventor Address	D L5 1-4 INA
INCLM **(2)**	Issue Main National Patent Classification Code	D 2,5 INCLM
INCLS **(2)**	Issue Secondary National Patent Classification Code	D L2 1-3 INCLS
IPC.F **(3)**	IPC, First Invention	D IPC.F
IPCI **(2,5)**	IPC, Initial Classification	D IPCI
IPCR **(2)**	IPC, Reclassification	D IPCR
IT	Index Term (CAS data)	D 1,5,10 IT
LA **(3)**	Language	D LA
LN.CNT	Line Count	D LN.CNT
LREP (AG)	Legal Representative	D 2 7 LREP
MFN	Microfilm Frame Number of document at the U.S. Patent and Trademark Office	D MFN
MRN	Microfilm Reel Number of document at the USPTO	D MRN
NCLM **(2)**	Current Main National Patent Classification Code	D 1-2 NCLM
NCLS **(2)**	Current Secondary National Patent Classification Code	D 1-5 NCLS
OS	Other Source Chemical Abstracts	D OS
PA (CS)	Patent Assignee (includes PAA and PAT)	D 1-3 PA
PAA **(3)**	Patent Assignee Address	D 4 9 PAA
PAO	Patent Assignee, Original	D PAO
PARN	Parent Case Data	D L3 5-7 PARN
PAT **(3)**	Patent Assignee Type	D L3 PAT 1-5
PI (PN) **(1)**	Patent Information	D PI L8
PNK	Patent Number/Kind Code	D PNK
PRAI (PRN) **(1)**	Priority Information	D PRAI
PTERM	Term of Patent	D 4 PTERM

DISPLAY and PRINT Formats (cont'd)

Format	Content	Examples
RAA	Reassignment Agent	D RAA
RAC	Reassignment Company	D RAC
RAD	Reassignment Date	D RAD
RAK	Reassignment Kind	D RAK
RAUP	Reassignment Update Date	D RAUP
REN	Reference Non-Patent Information	D L3 6,8 REN
REP (RPN)	Reference Patent Information	D 1-4 REP
RLI (RLN) **(1)**	Related Application Information	D L9 RLI 3-6
RN **(3)**	CAS Registry Number (CAS data)	D RN 2,6-10
RNK **(6)**	Relevance Rank in single file	D RNK
RNKM **(6)**	Relevance Rank in multifiles	D RNKM
ST	Supplementary Terms (CAS data)	D ST
SUMM	Summary of the Invention	D L5 1-4 SUMM
TI **(2)**	Title	D 2,5 TI
UO	Ultimate Owner	D UO
UOS	Ultimate Owner Standardized	D UOS
USPA	Applicant Name (Corporate)	D USPA
ABS	AB	D L3 1-5 ABS
ALL **(1)**	PatentPak, AN, TI, IN, USPA, PA, UO, UOS, PI, AI, PTERM, DCD, RLI, PRAI, DT, FS, REP, REN, EXNAM, LREP, CLMN, ECL, DRWN, AB, GOVI, PARN, SUMM, DRWD, DETD, CLM, INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), IPC (IPC.VER, ICM, ICS, IPCI, IPC), EXF, ARTU	D 3 ALL
APPS **(1)**	AI, PRAI, RLI	D APPS
BIB **(1)**	PatentPak, AN, TI, IN, USPA, PA, UO, UOS, PI, AI, PTERM, DCD, RLI, PRAI, DT, FS, EXNAM, LREP, CLMN, ECL, DRWN, LN.CNT	D BIB
BPP **(1)**	PatentPak, AN, TI, IN, PA, UO, UOS, USPA, PI, AI, PTERM, DCD, RLI, PRAI, DT, FS, EXNAM, LREP, CLMN, ECL, DRWN, LN.CNT, PPAK	D BPP
CAS	OS, CC, ST, IT	D CAS 3 L2
CBIB	Compressed bibliographic information	D CBIB
CPC	CPCI, CPCR for the basic patent and patent family members	D CPC
CPC.TAB	CPC, CPC.KW, CPC.ACD, CPC.VER in tabular format	D CPC.TAB
CPC.UNIQ	Deduplicated list of CPC codes for the patent family	D CPC.UNIQ
DALL **(1)**	ALL, delimited for postprocessing	D 1-15 DALL
IABS	ABS, with a text label	D 1-4 IABS
IALL **(1)**	ALL, indented with text labels	D IALL 2
IBIB **(1)**	BIB, indented with text labels	D IBIB 4-10
IBPP**(1)**	BPP, indented with text labels	D IBPP
IMAX **(1)**	MAX, indented with text labels	D IMAX 1
INCL **(2)**	Issue National Patent Classification Code (INCLM, INCLS)	D 1,5 L4 INCL
IND	INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), IPC (IPC.VER, ICM, ICS, IPCI, IPC), EXF, ARTU, OS, CC, ST, IT	D L2 IND 1-4
IPC **(2,5)**	International Patent Classifications (IPC.VER, ICM, ICS, IPCI, IPCR)	D 1-4 L2 IPC
IPC.TAB **(2,5)**	IPC in Tabular Format	D IPC.TAB
IPC.UNIQ	Unique IPC codes for a basic and equivalents	D IPC.UNIQ
IRAI (PA.HIST)	RAI, indented with text labels	D IRAI 1, D PA.HIST
ISPP	SPP, indented with text labels	D ISPP
ISTD **(1)**	STD, indented with text labels	D ISTD 1,5
MAX **(1)**	PatentPak, AN, TI, IN, USPA, PA, UO, UOS, PI, AI, PTERM, DCD, RLI, PRAI, DT, FS, REP, REN, EXNAM, LREP, RAD, RAUP, RAK, PAO, RAXD, RAC, RAA, MRN, MFN, CLMN, ECL, DRWN, AB, GOVI, PARN, SUMM, DRWD, DETD, CLM, INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), IPC (IPC.VER, ICM, ICS, IPCI, IPCR), EXF, ARTU, OS, CC, ST, IT	D MAX L1 1
NCL **(2)**	National Patent Classification Code (NCLM, NCLS)	D 6,12 L1 NCL
PATS **(1)**	PI, REP, RLI	D PATS 1-3
RAI (LSUS)	RAD, RAXD, RAUP, RAK, PAO, RAC, RAC.CNY, RAA, MRN, MFN	D RAI, D LSUS
SBIB **(1)**	PatentPak, AN, TI, IN, USPA, PA, UO, UOS, PI, AI, RLI, PRAI, DT, FS, LN.CNT	D SBIB

SCAN **(2,4)**	AN, TI, NCL (NCLM, NCLS), CPC (CPCI, CPCR), IPC (IPC.VER, ICM, ICS, IPCI, IPCR) (random answer display, no answer)	D SCAN

DISPLAY and PRINT Formats (cont'd)

Format	Content	Examples
SPP **(1)**	PatentPak, AN, TI, IN, USPA, PA, UO, UOS, PI, AI, RLI, PRAI, DT, FS, LN.CNT, INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), IPC (IPC.VER, ICM, ICS, IPCI, IPCR), EXF, PPAK (If PatentPak enabled)	D SPP
STD **(1)**	PatentPak, AN, TI, IN, USPA, PA, UO, UOS, PI, AI, RLI, PRAI, DT, FS, LN.CNT, INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), IPC (IPC.VER, ICM, ICS, IPCI, IPCR), EXF (STD is the default)	D STD 1, 8
TRIAL (FREE) **(2)**	AN, TI, INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), IPC (IPC.VER, ICM, ICS, IPCI, IPCR)	D TRIAL
FP **(1)**	Front page format for: PatentPak, PI, TI, IN, USPA, PA, UO, UOS, PTERM, DCD, AI, RLI, PRAI, IPC (IPC.VER, ICM, ICS, IPCI, IPCR), INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), EXF, REP, REN, ARTU, EXNAM, LREP, CLMN, DRWN, AB	D FP
FPALL **(1)**	Front page format for: PatentPak, PI, TI, IN, USPA, PA, UO, UOS, PTERM, DCD, AI, RLI, PRAI, IPC (IPC.VER, ICM, ICS, IPCI, IPCR), INCL (INCLM, INCLS), NCL (NCLM, NCLS), CPC (CPCI, CPCR), REP, REN, EXF, ARTU, EXNAM, LREP, CLMN, DRWN, AB, PARN, SUMM, DRWD, DETD, CLM	D FPALL L10 1
FPBIB **(1)**	Front page format for: PatentPak, PI, TI, IN, USPA, PA, UO, UOS, PTERM, DCD, AI, RLI, PRAI, REP, REN, EXNAM, LREP, CLMN, DRWN	D 1-10 FPBIB
CPC.HIT (HITCPC)	HIT display of CPC code searched	D CPC.HIT or D HITCPC
FHITSTR	First hit CAS Registry Number, its text modification, its CA index name, and its structure diagram	D CBIB FHITSTR
HIT	Fields containing hit terms	D HIT
HITIPC (IPC.HIT)	Hit IPC	D HITIPC or D IPC.HIT
HITPPAK	Hit PatentPak entry (based on chemical name or RN search)	D STD IT HITPPAK
HITRN	Hit CAS Registry Number and its text modification	D HITRN
HITSTR	Hit CAS Registry Number, its text modification, its CA index name, and its structure diagram	D HITSTR
KWIC	Up to 20 words before and after hit terms (KeyWord-In-Context)	D KWIC
OCC **(2)**	Number of occurrences of hit terms and fields in which they occur	D OCC

(1) By default, patent numbers, application and priority numbers are displayed in STN format. To display them in Derwent format, enter SET PATENT DERWENT at an arrow prompt. To reset display to STN format, enter SET PATENT STN.
(2) No online display fee for the format.
(3) Custom display only.
(4) SCAN must be specified on the command line, i.e., D SCAN or DISPLAY SCAN.
(5) IPCI-2 is a display label relating to the most recent publication of the patent document. It is part of the IPCI display field.
(6) The RNK and RNKM formats display only the hit term occurrence ranking for the record, with the following line: RELEVANCE SCORE ##. RNK is for the single file environment, while RNKM is for the multifile environment.

Extended DISPLAY and PRINT Formats

Use the extended display formats to display not only the publication from the USPAT2 file, i.e., the latest publication, but also the original publication for the invention from the USPATFULL file.

Format	Content	Examples
BIB.EX	BIB for the latest plus BIB for the original publication	D 1-5 BIB.EX
CLM.EX	CLM for the latest plus CLM for the original publication	DIS L2 CLM.EX
FP.EX	FP for the latest plus FP for the original publication	D FP.EX 1-
IBIB.EX	IBIB for the latest plus BIB for the original publication	D IBIB.EX 1-3 L5
IMAX.EX	IMAX for the latest plus IMAX for the original publication	D IMAX.EX 1
MAX.EX	MAX for the latest plus MAX for the original publication	DISPLAY L1 1 MAX.EX
STD.EX	STD for the latest plus STD for the original publication	D STD.EX L5 3, 6

Full-Text Browsing

User Request	Example	System Response
DISPLAY BROWSE	=> DISPLAY BROWSE ENTER (L1) OR L#:. ENTER (DIS), ANSWER NUMBERS, OR END:	NOVICE version
D BRO	=> D BRO L1 :	EXPERT version
Answer number(s)	:1-3	display answers 1, 2, and 3 in default format
	:.	display next answer in default format
Answer number(s) and format	:4 HIT	display answer 4 in HIT format
Format only	:TI TX	display title and text of last answer displayed
*Format	:*KWIC	change default to KWIC; no answer displayed
Forward n fields	:F3	move forward 3 fields
Backward n fields	:B1	move backward 1 field
Search forward for a character string	:S GROWTH REGUL	search forward within record for 'growth regul'
	:S	repeat search forward for the current string
Search backward for a character string	:S- ALKANOIC ACID	search backward within record for 'alkanoic acid.'
	:S-	repeat search backward for the current string
End DISPLAY BROWSE	:END =>	exit DISPLAY BROWSE and return to => prompt

SELECT, ANALYZE, and SORT Fields

The SELECT command is used to create E-numbers containing terms taken from the specified field in an answer set.

The ANALYZE command is used to create an L-number containing terms taken from the specified field in an answer set.

The SORT command is used to rearrange the search results in either alphabetic or numeric order of the specified field(s).

(1) HIT may be used to restrict terms extracted to terms that match the search expression used to create the answer set, e.g., SEL HIT TI.
(2) SELECT HIT and ANALYZE HIT are not valid with this field.
(3) Enter SET PATENT DERWENT at an arrow prompt (=>) to SELECT or ANALYZE patent and application numbers in Derwent format.
(4) Selects or analyzes the application number with /AP appended to the terms created by SELECT.
(5) Selects or analyzes AP, PRN, and RLN and appends /APPS to the terms created by SELECT.
(6) Appends /IN to the terms created by SELECT.
(7) Extracts patent number, publication year with a truncation symbol appended and with /RE appended to the terms created by SELECT.
(8) Appends /PA to the terms created by SELECT.
(9) Appends /BI to the terms created by SELECT.
(10) Selects or analyzes all codes and appends /IPC to the terms created by SELECT.
(11) Appends /LREP to the term created by SELECT.
(12) Appends /PN to the terms created by SELECT.
(13) Selects or analyzes the PC and RPC and appends /PCS to the] terms created by SELECT.
(14) Selects or analyzes the PN and appends /PN to the terms created by SELECT.
(15) Selects or analyzes PN, RPN, RLPN and appends /PATS to the terms created by SELECT.
(16) Selects or analyzes the PRN and appends /PRN to the terms created by SELECT.
(17) Selects or analyzes the RPN and appends /RPN to the terms created by SELECT.
(18) Selects or analyzes the RLN and appends /RLN to the terms created by SELECT.
(19) Appends /DT to the terms created by SELECT.
(20) Select CPC selects all CPCI and CPCR classifications and appends /CPC as a field code.
(21) SELECT appends /CPC.

NUMBER OF CLAIMS: 30
EXEMPLARY CLAIM: 1
NUMBER OF DRAWINGS: 17 Drawing Figure(s); 16 Drawing Page(s)
ABSTRACT:

A method for aligning a stent with a stent support includes the steps of (1) placing a stent support and a stent mounted on the stent support in a vertically position with the stent support's first support element at a lower position and the stent support's second support element at an upper position; (2) obtaining a digital image of the stent support and stent; (3) analyzing the digital image of the stent support and stent to compute the vertical position of the stent's upper end; (4) computing a desired position of the second support element based on the position of the stent's upper end; and (5) using a positioning device to move the second support element to the desired position. The movement of the second support element causes the conical sections of the first and second support elements to engage the respective ends of the stent to

center the stent around a core element of the stent support and to secure the stent in a longitudinal direction of the stent support.

FIELD OF THE INVENTION

This invention relates to a method and device for aligning a stent with a stent support.

BACKGROUND

In the last several years, minimally invasive surgical procedures, such as percutaneous transluminal coronary angioplasty (PTCA), have become increasingly common. A PTCA procedure involves the insertion of a catheter into a coronary artery to position an angioplasty balloon at the site of a stenotic lesion that is at least partially blocking the coronary artery. The balloon is then inflated to compress the stenosis and to widen the lumen in order to allow an efficient flow of blood through the coronary artery.

• • •

Currently there are no efficient and reliable methods to ensure a proper alignment of a stent with a stent support.

SUMMARY

The method and device of the present invention can reliably, efficiently and precisely mount a stent on a stent support with a proper alignment of the axes of the stent and stent support.

According to one aspect of the invention, a method for aligning a stent with a stent support includes the steps of (1) placing a stent support and a stent mounted thereon in a vertical position with the stent support's first support element at a lower position and the stent support's second support element at an upper position, (2) obtaining a digital image of the stent support and stent, (3) analyzing the digital image of the stent support and stent to compute the vertical position of the stent's upper end, (4) computing a desired position of the second support element based on the position of the stent's upper end, and (5) using a positioning device to move the second support element to the desired position. The movement of the second support element causes the conical sections of the first and second support elements to engage the respective ends of the stent to center the stent around a core element of the stent support and to secure the stent in a longitudinal direction of the stent support.

• • •

According to another aspect of the invention, a device for aligning a stent with a stent support includes a stent support receptacle for receiving a first support element of a stent support to position the stent support in a vertical position, a digital imaging device for imaging a stent mounted on the stent support, a computer, and a positioning device for moving a second support element of the stent support to the desired position. The computer can be used to compute the position of an upper end of the stent from a digital image of the stent support and stent and to compute a desired position of the second support element of the stent support based on the position of the stent's upper end. The computer can also be used to compute stent runout, stent type and stent orientation. In a preferred embodiment, the device for aligning a stent with a stent support further includes a core element support for supporting a free end of a core element of the stent support so that the core element and the first support element are substantially coaxial.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 is a perspective view of an exemplary device of the present invention for mounting a stent on a stent support in a way that reduces stent runout.

FIG. 2 is a perspective view of a cylindrically-shaped stent.

FIG. 3 is a schematic diagram for a spray coating apparatus.

FIG. 4 is a perspective view of a stent support.

FIGS. 5A and 5B are perspective views showing the conical portions of the first and second support elements of a stent support supporting the ends of a stent.

FIG. 6 is a perspective view of a stent mounted on the core element of a stent support without the second support element of the stent support.

FIG. 7 is a perspective view of a stent mounted on the core element of a stent support with the second support element of the stent support.

FIG. 8 is a perspective view of a stent and a stent support mounted vertically in a stent support receptacle.

FIG. 9 is a perspective view of the free end of a core element being supported by a first core element support.

FIG. 10 is a cross-sectional view of the first core element support.

FIG. 11 is a perspective view of a second core element support.

FIG. 12 is a perspective view of a positioning device.

FIG. 13 is a schematic diagram showing a feedback control loop for controlling the position of the second support element of the stent support.

FIG. 14 is a view of a stent mounted on a stent support with stent runout.

FIGS. 15 and 16 are perspective views of crowns at a stent end.

DETAILED DESCRIPTION OF PREFERRED EMBODIMENTS

One aspect of the present invention relates to a device for precisely and efficiently mounting a stent on a stent support in a way that reliably reduces stent runout. FIG. 1 illustrates an exemplary device 10 of the present invention. The device 10 includes a stent support receptacle 12 for receiving a stent support 16 to position the stent support 16 in a vertical position; a digital imaging device 20, such as a digital camera; a computer 14 (FIG. 13); and a positioning device 18. The device 10 may include additional components, as shown in FIG. 1, which will be described hereinafter.

• • •

While particular embodiments of the present invention have been shown and described, it will be obvious to those skilled in the art that changes and modifications can be made without departing from this invention in its broader aspects. Therefore, the appended claims are to encompass within their scope all such changes and modifications as fall within the true spirit and scope of this invention.

What is claimed is:

1. A method for aligning a stent with a stent support, comprising: placing a stent support and a stent mounted on the stent support in a vertical position with the stent support's first support element at a lower position and the stent support's second support element at an upper position, wherein the lower end of the stent faces a conical portion of the first support element and the upper end of the stent faces a conical portion of the second support element; obtaining a digital image of the stent support and stent; analyzing the digital image of the stent support and stent to compute the vertical position of the stent's upper end; computing a desired position of the second support element based on the position of the stent's upper end; and using a positioning device to move the second support element to the desired position, wherein the movement of the second support element causes the conical portions of the first and second support elements to engage the respective ends of the stent to center the stent around a core element of the stent support and to secure the stent in a longitudinal direction of the stent support.

• • •

29. A device for aligning a stent with a stent support, comprising: a stent support receptacle for receiving a first support element of a stent support to position the stent support in a vertical position; a digital imaging device for

imaging a stent mounted on the stent support; a computer connected to the digital imaging device for receiving a digital image of the stent support and the stent mounted thereon, wherein the computer computes the position of an upper end of the stent from the digital image of the stent support and the stent mounted thereon and computes a desired position of a second support element of the stent support based on the position of the stent's upper end; and a positioning device for moving the second support element to the desired position.

30. The device of claim 29, further comprising: a core element support for supporting a free end of a core element of the stent support so that the core element and the first support element are substantially coaxial.

CLM What is claimed is:

1. A method for aligning a stent with a stent support, comprising: placing a stent support and a stent mounted on the stent support in a vertical position with the stent support's first support element at a lower position and the stent support's second support element at an upper position, wherein the lower end of the stent faces a conical portion of the first support element and the upper end of the stent faces a conical portion of the second support element; obtaining a digital image of the stent support and stent; analyzing the digital image of the stent support and stent to compute the vertical position of the stent's upper end; computing a desired position of the second support element based on the position of the stent's upper end; and using a positioning device to move the second support element to the desired position, wherein the movement of the second support element causes the conical portions of the first and second support elements to engage the respective ends of the stent to center the stent around a core element of the stent support and to secure the stent in a longitudinal direction of the stent support.

2. The method of claim 1, further comprising: the step of obtaining the digital image of the stent support and stent includes using a digital imaging device to obtain the digital image of the stent support and stent.

3. The method of claim 1, further comprising: computing stent runout after the step of using the positioning device to move the second support element.

4. The method of claim 3, further comprising: if the computed stent runout is greater than an acceptable limit, lifting the second support element to disengage the second support element from the upper end of the stent.

5. The method of claim 4, further comprising: after the second support element has been disengaged from the upper end of the stent, repeating the step of obtaining a digital image of the stent support and stent; repeating the step of analyzing the digital image; repeating the step of computing a desired position of the second support element; and repeating the step of using the positioning device to move the second support element to the desired position.

6. The method of claim 1, further comprising: obtaining a second digital image of the stent support and stent after the step of using the positioning device to move the second support element; and computing the actual position of the second support element from the second digital image and comparing the actual position of the second support element with the desired position.

7. The method of claim 6, further comprising: if the difference between the actual and desired positions of the second support element exceeds an acceptable limit, using the positioning device to move the second support element to the desired position.

8. The method of claim 1, further comprising: re-seating the stent on the conical portion of the first support element before the step of obtaining the digital image of the stent support and the stent.

9. The method of claim 8, wherein the step of re-seating includes vibrating the first support element.

10. The method of claim 8, wherein the step of re-seating includes striking the first support element.

11. The method of claim 8, wherein the step of re-seating includes lifting the stent off the first support element and releasing the stent.

12. The method of claim 8, wherein the step of re-seating includes tapping on the stent.

13. The method of claim 1, further comprising determining the orientation of the stent from the digital image of the stent support and stent.

14. The method of claim 13, wherein the step of determining the orientation of the stent includes examining crown types at least one stent end.

15. The method of claim 1, further comprising determining the type of the stent from the digital image of the stent support and stent.

16. The method of claim 15, further comprising computing the length of the stent and determining the type of the stent based on the length of the stent.

17. The method of claim 15, further comprising computing the number of end crowns at least one of the stent ends and determining the type of the stent based on the number of end crowns.

18. The method of claim 15, further comprising determining the types of end crowns at least one of the stent ends and determining the type of the stent based on the types of end crowns.

19. The method of claim 15, further comprising: determining the types of end crowns at least one of the stent ends; computing the length of the stent; and determining the type of the stent based on the types of end crowns and the length of the stent.

20. The method of claim 1, wherein the digital image includes the entire outer surfaces of the stent ends.

21. The method of claim 20, further comprising determining the orientation of the stent from the digital image of the stent support and stent.

22. The method of claim 21, wherein the step of determining the orientation of the stent includes examining the end crown types at least one stent end.

23. The method of claim 20, further comprising determining the type of the stent from the digital image of the stent support and stent.

24. The method of claim 23, further comprising computing the length of the stent and determining the type of the stent based on the length of the stent.

25. The method of claim 23, further comprising determining the number of end crowns at least one of the stent ends and determining the type of the stent based on the number of end crowns.

26. The method of claim 23, further comprising determining the types of end crowns at least one of the stent ends and determining the type of the stent based on the types of end crowns.

27. The method of claim 23, further comprising: determining the types of end crowns at least one of the stent ends; computing the length of the stent; and determining the type of the stent based on the types of end crowns and the length of the stent.

28. The method of claim 1, further comprising: supporting a free end of the core element so that the core element and the first support element

are substantially coaxial.

29. A device for aligning a stent with a stent support, comprising: a stent support receptacle for receiving a first support element of a stent support to position the stent support in a vertical position; a digital imaging device for imaging a stent mounted on the stent support; a computer connected to the digital imaging device for receiving a digital image of the stent support and the stent mounted thereon, wherein the computer computes the position of an upper end of the stent from the digital image of the stent support and the stent mounted thereon and computes a desired position of a second support element of the stent support based on the position of the stent's upper end; and a positioning device for moving the second support element to the desired position.

30. The device of claim 29, further comprising: a core element support for supporting a free end of a core element of the stent support so that the core element and the first support element are substantially coaxial.

-- Original Publication -- (APPLICATION - A1)

CLM What is claimed is:

1. A method for aligning a stent with a stent support, comprising: placing a stent support and a stent mounted on the stent support in a vertical position with the stent support's first support element at a lower position and the stent support's second support element at an upper position, wherein the lower end of the stent faces a conical portion of the first support element and the upper end of the stent faces a conical portion of the second support element; obtaining a digital image of the stent support and stent; analyzing the digital image of the stent support and stent to compute the vertical position of the stent's upper end; computing a desired position of the second support element based on the position of the stent's upper end; and using a positioning device to move the second support element to the desired position, wherein the movement of the second support element causes the conical sections of the first and second support elements to engage the respective ends of the stent to center the stent around a core element of the stent support and to secure the stent in a longitudinal direction of the stent support.

2. The method of claim 1, further comprising: the step of obtaining the digital image of the stent support and stent includes using a digital imaging device to obtain the digital image of the stent support and stent.

3. The method of claim 1, further comprising: computing stent runout after the step of using the positioning device to move the second support element.

4. The method of claim 3, further comprising: if the computed stent runout is greater than an acceptable limit, lifting the second support element to disengage the second support element with the upper end of the stent.

5. The method of claim 4, further comprising: after the second support element has been disengaged with the upper end of the stent, repeating the step of obtaining a digital image of the stent support and stent; repeating the step of analyzing the digital image; repeating the step of computing a desired position of the second support element; repeating the step of using the positioning device to move the second support element to the desired position.

6. The method of claim 1, further comprising: obtaining a second digital image of the stent support and stent after the step of using the positioning device to move the second support element; and computing the

actual position of the second support element from the second digital image and comparing the actual position of the second support element with the desired position.

7. The method of claim 6, further comprising: if the difference between the actual and desired positions of the second support element 46 exceeds an acceptable limit, using the positioning device to move the second support element 46 to the desired position.

8. The method of claim 1, further comprising: re-seating the stent on the conical portion of the first support element before the step of obtaining the digital image of the stent support and the stent;

9. The method of claim 8, wherein the step of re-seating includes vibrating the first support element.

10. The method of claim 8, wherein the step of re-seating includes striking the first support element.

11. The method of claim 8, wherein the step of re-seating includes lifting the stent off the first support element and releasing the stent.

12. The method of claim 8, wherein the step of re-seating includes tapping on the stent.

13. The method of claim 1, further comprising determining the orientation of the stent from the digital image of the stent support and stent.

14. The method of claim 13, wherein the step of determining the orientation of the stent includes examining crown types at least one stent end.

15. The method of claim 1, further comprising determining the type of the stent from the digital image of the stent support and stent.

16. The method of claim 15, further comprising computing the length of the stent and determining the type of the stent based on the length of the stent.

17. The method of claim 15, further comprising computing the number of end crowns at least one of the stent ends and determining the type of the stent based on the number of end crowns.

18. The method of claim 15, further comprising determining the types of end crowns at least one of the stent ends and determining the type of the stent based on the types of end crowns.

19. The method of claim 15, further comprising: determining the types of end crowns at least one of the stent ends; computing the length of the stent; and determining the type of the stent based on the types of end crowns and the length of the stent.

20. The method of claim 1, wherein the digital image includes the entire outer surfaces of the stent ends.

21. The method of claim 20, further comprising determining the orientation of the stent from the digital image of the stent support and stent.

22. The method of claim 21, wherein the step of determining the orientation of the stent includes examining the end crown types at least one stent end.

23. The method of claim 20, further comprising determining the type of the stent from the digital image of the stent support and stent.

24. The method of claim 23, further comprising computing the length of the stent and determining the type of the stent based on the length of the stent.

25. The method of claim 23, further comprising determining the number of end crowns at least one of the stent ends and determining the type of the stent based on the number of end crowns.

26. The method of claim 23, further comprising determining the types of end crowns at least one of the stent ends and determining the type of the stent based on the types of end crowns.

27. The method of claim 23, further comprising: determining the types of end crowns at least one of the stent ends; computing the length of the stent; and determining the type of the stent based on the types of end crowns and the length of the stent.

28. The method of claim 1, further comprising: supporting a free end of the core element so that the core element and the first support element are substantially coaxial.

29. A device for aligning a stent with a stent support, comprising: a stent support receptacle for receiving a first support element of a stent support to position the stent support in a vertical position; a digital imaging device for imaging a stent mounted on the stent support; a computer connected to the digital imaging device for receiving a digital image of the stent support and the stent mounted thereon, wherein the computer computes the position of an upper end of the stent from the digital image of the stent support and the stent mounted thereon and computes a desired position of a second support element of the stent support based on the position of the stent's upper end; and a positioning device for moving the second support element to the desired position.

30. The device of claim 29, further comprising: a core element support for supporting a free end of a core element of the stent support so that the core element and the first support element are substantially coaxial.
